PROFILE

Staff-level software engineer with 10+ years of experience building and modernizing production products across frontend, backend, mobile, cloud, and delivery infrastructure. Strong in TypeScript, React and Next.js, Node.js, PostgreSQL, multi-tenant SaaS, offline-first systems, AWS, Azure, automated QA, observability, and production operations. Designs AI-native engineering workflows that turn scoped product intent into repository-grounded implementation, deterministic verification, bounded correction, and controlled release decisions.

CORE CAPABILITIES

Product engineering: TypeScript, React, Next.js, Node.js, REST APIs, PostgreSQL, Redis, WebSockets

Architecture & mobile: Multi-tenant SaaS, permissions, idempotency, offline synchronization, React Native / Expo

Cloud & quality: AWS, Azure, Docker, Terraform, GitHub Actions, Vitest, Playwright, observability

Agentic engineering: LLM integration, tool-enabled agents, repository context, reusable skills, verification gates

CURRENT EXPERIENCE

Independent Practice | Staff-Level AI-Native Software Engineer

Jan 2026 - Present | Independent | Remote

- Serve as technical lead and CTO-level owner on product engagements: set technical direction, architecture, delivery priorities and release decisions for multi-tenant SaaS products.
- Architect and operate agentic software-delivery systems, defining repository context, reusable skills, task orchestration, tool permissions, verification gates and release controls.
- Run lead agents and isolated per-task environments on a remote Linux server, with scoped permissions and human approval for credentials, production changes and releases.
- Design multi-tenant product architecture across Next.js, TypeScript, PostgreSQL and cloud delivery, including tenant permissions, authentication, administration and change-request workflows.
- Define acceptance criteria and evidence requirements that distinguish implemented, verified, deployed and observed-working outcomes.

Ordr.now | Founder & CTO

Oct 2025 - Present | Self-employed | Philippines / Remote

- Architect and build a hospitality platform connecting point of sale, customer ordering, kitchen operations, inventory and staff workflows across web and mobile.
- Design offline synchronization, durable queues, restart recovery and idempotent operations to handle intermittent connectivity and shared-device workflows.
- Own the TypeScript, React, Node.js and PostgreSQL stack, React Native / Expo clients, Render and Cloudflare delivery, automated tests and production release decisions.
- Design the repository-owned agentic delivery workflow used to build it: scoped agent implementation, automated checks, physical-device verification, bounded correction and explicit human release authority.

PREVIOUS EXPERIENCE

PRIVV | Senior Software Engineer

Feb 2025 - Mar 2026 | Contract | Remote

- Led incremental frontend modernization from CRA to Vite, SASS to Tailwind CSS v4 and React 17 to 19 while preserving established production behavior.
- Restructured the application into feature modules and moved Redux-heavy server-data flows to TanStack Query and Zustand, with explicit cache invalidation and optimistic updates.
- Introduced Vitest, Biome and delivery checks, and delivered features across the frontend and NestJS / PostgreSQL backend.

DataGPT AI | Software Engineer

May 2025 - Nov 2025 | Part-time contract | Remote

- Built analytical interfaces for an AI product, including heatmaps, treemaps and stacked bars, with explicit progress, result and failure states for asynchronous queries.
- Built the Agents V1 node-based workflow interface for data-source, prompt, condition and recipient flows using React and TypeScript.

Experience Digital | Senior Software Engineer to DevOps Engineer

Mar 2022 - Oct 2024 | Full-time | Australia / Remote

- Modernized production applications with Next.js, TypeScript, tRPC and Prisma while retaining the existing database and continued feature delivery.
- Built CI/CD and infrastructure automation with GitHub Actions, Terraform and Docker; supported AWS / Azure delivery and Grafana, Prometheus and Loki observability.

Chorefree Living | Front-end Lead Software Engineer

Apr 2021 - Mar 2022 | Full-time | Canada / Remote

- Led frontend architecture and delivery for booking and scheduling workflows using React, TypeScript, Apollo GraphQL and Gatsby; added error tracking and analytics.

EARLIER EXPERIENCE

Arcanys | Web Software Developer | Mar 2020 - Apr 2021

Unpuzzle Marketing Consultants | Freelance Software Engineer | Jan - Dec 2020

IdeaRobin | Fullstack JavaScript Developer | Mar 2018 - Feb 2020
Software Engineering Intern | May 2017 - Mar 2018

Upwork & Elance | Freelance digital and software work | 2014 - 2017

EDUCATION

Bachelor of Science in Communication and Information Technology

SELECTED TECHNICAL WRITING

Agentic Closed-Loop Development - engineering context, verification, agent permissions and accountable releases.

Inside the Ordr.now Agentic Engineering Loop - the method applied to an offline-first POS, with device and production proof.
