SUMMARY

Senior Fullstack Engineer with 10 years of experience and strong depth in system architecture and DevOps. I modernize legacy codebases, design scalable web systems, and ship production-ready platforms end to end across frontend, backend, and infrastructure. Strong in React and TypeScript, Node.js APIs, PostgreSQL, Terraform, CI/CD, and AWS and Azure patterns, with a track record delivering remotely across teams in multiple continents. I prioritize maintainability, performance, and predictable delivery.

CORE SKILLS

React · TypeScript · Vite · Next.js · Tailwind CSS v4 · Design Tokens · ShadCN · TanStack Query (React Query) · Zustand · Redux migrations · Node.js · Express · REST APIs · PostgreSQL · Prisma/Drizzle ORM · Redis · WebSockets · Docker · Terraform · GitHub Actions · AWS (ECS, S3, RDS, ECR, EC2, Route 53) · Azure (ADF/ADLS exposure) · Observability (Grafana/Prometheus/Loki) · Architecture (feature-based, modular, layered/Clean, event-driven)

EXPERIENCE

PRIVV — Senior Software Engineer (Full-time)

Feb 2025 – Present | Remote (Arizona, United States)

Modernizing a legacy React frontend for a construction project management platform.

- Upgraded core stack: **React 17 to 19**, TypeScript, **CRA to Vite**, **SASS to Tailwind v4 with token-based design system** to reduce build friction and enable faster iteration.
- Re-architected into **feature-based modules** with reusable hooks/components to improve change isolation and parallel development.
- Migrated state/data patterns: **Redux to TanStack Query + Zustand** using cache-first query key strategy and structured invalidation (optimistic updates where applicable).
- Implemented **token-driven UI** with **Tailwind v4 design tokens** for consistent styling and scalable theming.
- Raised quality bar: ESLint, Prettier, Vitest, Husky; enforced SRP and modular boundaries to reduce regressions.
- Decomposed a legacy React monolith into smaller, maintainable modules, improving separation of concerns (723 to 2,197 files) and cutting average file size by 56%.

Tech: React · NestJS · TypeScript · Vite · Tailwind v4 · TanStack Query · Zustand · Vitest · ESLint/Prettier · Husky · Biome

DataGPT AI — Software Engineer (Part-time)

May 2025 – Nov 2025 | Remote (California, United States)

Improved reliability and usability of a chat-driven AI analytics product.

- Expanded in-chat analytics rendering to support advanced charts (e.g., heatmaps, treemaps, stacked bars) for exploratory analysis.
- Implemented retry + recovery flow for long-running requests to reduce dropped responses and improve perceived reliability.
- Delivered **Agents V1 orchestration UI** (node-based workflow builder: Data Source, Prompt, Condition, Recipient) as foundation for automation UX.

Tech: React · TypeScript · Data Visualization · Reliability Patterns · Workflow UI (node-based) · Analytics UX

Experience Digital — Senior Software Engineer to DevOps Engineer (Full-time)

Mar 2022 – Oct 2024 | Remote (New South Wales, Australia)

Fullstack-to-DevOps progression supporting web services, CI/CD, and reliability.

- Delivered incremental modernization of a legacy product (Next.js adoption, UI modernization, improved state/data patterns) while managing production risk.
- Built and maintained CI/CD pipelines and infrastructure automation using **Terraform + Docker**, improving release repeatability and reducing manual ops.
- Supported production observability practices using Grafana/Prometheus/Loki for monitoring, logging, and diagnostics.
- Contributed to Power BI enablement work (pipeline support) in collaboration with the data team.

Tech: AWS (ECS/S3/RDS) · Terraform · Docker · Grafana/Prometheus/Loki · Next.js · React · PostgreSQL/MySQL

Chorefree Living Inc. — Front-end Lead Software Engineer (Full-time)

Apr 2021 – Mar 2022 | Remote (Vancouver, Canada)

- Led frontend structure and UI delivery; improved maintainability and feature scalability.
- Optimized data fetching with Apollo Client and added error tracking + analytics instrumentation.

Tech: React · TypeScript · Apollo GraphQL · Gatsby · SASS

PRODUCT ENGINEERING (SELECTED WORK)

Dumadine — Multi-tenant Cafe OS

Oct 2025 – Present (Philippines)

Multi-tenant cafe operating system in early beta. Working closely with a local café to shape requirements and iterate quickly, with active users in the Philippines.

- QR customer ordering (menu -> cart -> checkout) with real-time order status
- Merchant operations: order management, POS checkout, shift/cash drawer flow, refunds/voids.
- Kitchen operations: KDS with preparation stations and live ticket updates.
- Menu engine: categories/items, modifiers, variants/templates, availability rules.
- Inventory: ingredients/recipes, stock adjustments, suppliers/POs, sales-linked decrements.
- Loyalty: points/stamps accrual and redemption.
- Systems: multi-tenant foundation, monorepo/shared packages, WebSocket real-time propagation, idempotent consistency flows (orders -> inventory -> loyalty), Docker/CI/CD/IaC foundations.

Tech: TypeScript · React · Node.js/Express · PostgreSQL · Drizzle ORM · WebSockets · Docker · Terraform · AWS · Clean Architecture with dependency injection (DI)

EARLIER EXPERIENCE

Arcanys — Web Software Developer (Mar 2020 – Apr 2021)

Angular/AngularJS, REST integrations, feature delivery

Unpuzzle Marketing Consultants — Freelance (Jan 2020 – Dec 2020)

React + Node.js, IBM Cloudant

IdeaRobin — Fullstack JavaScript Developer (Mar 2018 – Feb 2020)

React/Vue, Socket.IO real-time apps, Node/Koa + MongoDB, AWS/Jenkins/Docker

IdeaRobin — Intern (May 2017 – Mar 2018)

React/jQuery features, WordPress integrations, UI/graphics support.

Upwork & Elance | Freelance (2014 to 2017)

Lead generation, executive assistant support, graphic design, and web development gigs.
